CashPilot

Profitable on paper. Broke on payday.

An AI financial assistant that warns small and medium business owners about cash shortages **7 to 30 days** before they happen, shows who to chase and what to do, and explains what they can safely borrow.

Cash flow forecast | Payment recovery | Explainable credit score | Loan readiness | AI agent

Live product: **cashpilot-ai-demo.vercel.app**

ELEVATOR PITCH

One assistant that tells an owner what will happen to their cash, who to chase, and what they can safely borrow.

Predict shortages

Daily balance for the next 7 to 30 days, the first day cash falls below a safety level, and the gap amount.

Collect smarter

Ranks customers by who to contact first and drafts the reminder in the right tone.

Explainable credit score

A 300 to 900 score from the business's own records, with every point explained.

Safe loan estimate

How much the business can repay safely, and which loan types its score opens.

Plus an AI agent: owners ask in plain language and it answers by calling the calculation engines as tools, never by guessing.

PROBLEM

Profitable businesses still run out of cash, and credit does not reach them.

90%
of firms worldwide are small businesses, with about 70% of employment.

40%
of formal MSMEs in emerging economies are credit-constrained.

$5.7T
MSME financing gap.

Source: IFC / World Bank, March 2025. See docs/project-need-sources.md.

Cash gaps arrive as a surprise

Owners see today's balance, not next week's shortage. Bills fall due before customers pay.

Credit feels like a black box

With no clear, explainable score, owners cannot see what holds them back from finance.

Borrowing is guesswork

Owners do not know how much they can repay safely and risk over-borrowing.

Money stuck in unpaid dues

Owners do not know who to chase first or how to word the reminder.

Generic AI chatbots can hallucinate financial numbers. Money decisions need numbers that can be audited.

SOLUTION

One web app, built for owners who are not finance experts.

1. Cash flow forecast

Projects the daily balance 7 to 30 days ahead, flags shortage days, and a what-if simulator tests a loan, a sales change or a new expense.

2. Cash Advisor

Turns the gap into an ordered action plan: collect, clear stock, delay a bill, cut spending. Each step shows its cash effect and risk.

3. Smart payment recovery

Ranks customers by priority, sets credit limits, and drafts reminders for WhatsApp or email. Sent only after the owner approves.

4. Supplier payment plans

Proposes instalments for a big bill, compares financing, and drafts the message to the supplier.

5. Credit score and loans

Explainable 300 to 900 score, a planner for raising it, readiness checklist, 8 loan types tied to the score, consent-based lender introductions.

6. AI financial agent

Ask in plain language. The agent calls the engines and explains the result. Product insights, reports and alerts complete the picture.

HOW IT WORKS

From records to a decision in three steps.

1

Add your records

Three-question setup, then import a CSV, scan a receipt, type a record, or connect a bank (Plaid sandbox today).

2

See what is coming

A dated forecast, ranked collections, an action plan, 16 kinds of alerts and a score with reasons.

3

Decide with confidence

The owner approves every step. Nothing is paid, sent or applied for without the owner pressing the button.

Owners can get their first cash forecast without learning finance: guided onboarding, one-click import and plain-language chat.

DIFFERENTIATION

The engines calculate. That is what makes the answers trustworthy.

Deterministic core, AI interface

Every number comes from tested engines. The language model never calculates, and any figure it adds that the engines did not produce is rejected.

Explainable by design

Each credit score shows the factors behind it, and a planner re-runs the real formula to show how many points each action earns.

Privacy first

Customer and supplier names are replaced by codes before any hosted model sees them. Owners can choose cloud, local-only or no AI.

Consent-based lender access

Lenders see only what the owner shares, through scoped, expiring, revocable links. Every view is logged.

Safe agent

Read-only tools, the business taken from the session, a limit on tool steps, and the owner confirms any action.

Zero paid AI services

Free-tier Gemini and Groq with automatic fallback, local models for offline use, free open-source OCR, and free-tier hosting.

CREDIT AND LENDING

Explainable credit for businesses with no credit history.

Score built from the business's own records

- 300 to 900 from six weighted factors, such as income, cash stability and repayment record
- Every point traced to a reason, for example "overdue receivables lowered your score by 38 points"
- New accounts see exactly which data to add, never an unexplained low score

A path to a better score and cheaper loans

- "How to raise your score": each step shows the points it earns
- 8 loan types, with better scores opening cheaper loans
- Safe monthly instalment and readiness checklist, an estimate and not an approval
- Introduction requests need the owner's consent and are tracked to funded

TRUST AND SECURITY (BUILT)

Financial data deserves real safeguards.

Accounts

Hashed passwords, short-lived tokens with rotating refresh cookies, optional authenticator-app two-factor sign-in, rate limits.

Data isolation

Per-business checks on every query, plus PostgreSQL row-level security so one business can never read another's rows.

Privacy

Encrypted contact fields, names masked before AI, audit log, data export and full account deletion.

Roles

Staff logins see only transactions, ledger and customers. Only the owner manages settings.

Lender access

Expiring, revocable, scoped tokens shown once. Consent recorded.

Quality

More than 260 automated tests cover the engines, the API and the delivery layer.

We do not claim certifications or penetration tests.

MARKET AND CUSTOMERS

Built for the owners of small businesses, and the lenders who serve them.

Primary: SME owners

Owners who manage cash, invoices, bills and loans themselves, often without a finance team.

Staff users

Team members with access to transactions, the ledger and customers only.

Partners: lenders

Read-only, consent-scoped access to a business's score and reports, for better lending decisions.

Customer segments

Shops and traders that sell on credit · Service businesses with invoices and recurring bills · Businesses that already keep records in spreadsheets or a bank account. English interface, any currency (USD, EUR, GBP, RMB, INR and more).

BUSINESS MODEL (PROPOSED)

Value for the owner first. Revenue from owners and lenders. Costs near zero.

SME subscription (freemium)

Free: transactions, customers, invoices, dashboard, 7-day forecast, alerts.
Pro, 14-day trial: 30-day forecast, Cash Advisor, recovery, supplier plans, credit score, loan center, reports, AI agent.

Lender partnerships (planned)

Loan products matched by score and amount. Lenders would pay a referral or qualified-lead fee for ready, consented borrowers.

Low cost base

Free LLM tiers, open-source OCR and free-tier hosting keep early costs very low.

Billing runs in demo mode today: plans switch without taking payment. Pricing is to be set with pilot customers.

GO TO MARKET

Start with a small pilot, prove value with real cash alerts, then bring in lenders.

Phase 1: pilot SMEs

Onboard a small group. CSV import, receipt scan and bank import make setup quick.

Phase 2: lender partners

Sign lenders who list products in the Loan Center and receive consented, ready borrowers.

Phase 3: scale

Grow through the website, owner referrals, and partners such as accountants and business groups.

Why onboarding is easy: a three-question setup, one-click import, and plain-language chat.

TRACTION AND STATUS

A working, deployed product.

20
features built across cash, collections, suppliers, credit, loans, reports, alerts and the agent

260+
automated tests

Live
on Vercel, Render and Neon free tiers: **cashpilot-ai-demo.vercel.app**

Built and working

Forecast and what-if · Cash Advisor · collections and reminders · supplier plans · products · credit score and planner · loan center · reports and goals · AI agent · notifications · staff, 2FA and lender access · CSV, receipt scan and bank import (sandbox).

[Fill in with real numbers only:] pilot users, businesses onboarded, forecasts generated, lender conversations, waitlist size. Delete this box if there are none yet.

ROADMAP

What is built today, and what comes next.

Built today

- Forecast, advisor, recovery, credit, loan, what-if engines
- Supplier payment plans and drafted messages
- CSV import, receipt scan, reports, AI agent
- Staff logins, plans, two-factor, lender consent
- PostgreSQL with row-level security, hosted deployment

Next (not built yet)

- Real lender integrations and a live loan marketplace
- Live payments for the Pro plan
- Production bank connections (sandbox only today)
- Mobile-wallet import and local banking APIs
- Verified-domain email and approved WhatsApp templates

Financing offers on screen and billing are demo mode today.

TEAM

The people building a trustworthy financial assistant for small businesses.

Arnob
[Role]. Architecture, engines and security. [Add relevant experience.]

[Team member 2]
[Role, finance / lending / SME experience]

[Team member 3]
[Role, product / design / business development]

[Add names, photos, roles, university and key achievements. An advisor from banking or lending would strengthen this slide. These details can only come from you.]

THE ASK

What we want to do next.

Pilot customers

Onboard the first pilot businesses and measure real forecast accuracy and recovered cash.

Lender and bank integrations

Connect real lenders, local banking and mobile-wallet APIs.

Compliance

Independent security review and lender compliance audits.

[Optional, only if you have them: funding amount, pricing basis, margin estimate and its assumptions. Do not show a margin figure without a basis.]

CLOSING AND VISION

Every small business deserves a financial advisor it can trust.

Thank you
